

# ADD More with One Solution

**ADD Energy E3<sup>®</sup> software empowers energy distributors with a comprehensive management system that integrates accounts receivable, credit, delivery, service, inventory and more.**

To ADD more to your business, contact us at 800.922.0972 or email us at [sales@addsys.com](mailto:sales@addsys.com)  
[www.addsys.com](http://www.addsys.com)

## ACCOUNTS RECEIVABLE AND OPERATIONS

Get paid faster with up-to-the-minute billing options, including invoicing, statements and payment plans (pre-buy, capped, budget and on-installment). Increase your efficiency even more by automatically processing credit card payments or by processing electronic funds transfers (EFT) directly from your customers' financial institutions.

## BOOKKEEPING AND TAX REPORTING

Maintain a flawless database with detailed transaction histories for comprehensive reporting, including tax reports, transaction search reports, audit trail reports and more.

## CREDIT AND COLLECTIONS

Increase your cash flow with current billing information and create carefully timed, automatic dunning letters when a customer exceeds or is about to exceed credit terms.

## MICROSOFT DYNAMICS GP

Integrate with Microsoft Dynamics GP to send purchase receipts through the accounts payable verification web services gateway.

## CUSTOMER DISPLAY

Cultivate a 360-degree view of each account from the prospect stage through customer acquisition. Easily view fuel usage, credit status, next delivery, last service date and other profile information. Deliver unmatched customer service informed by this quick access to key information.

## DELIVERY MANAGEMENT

Reduce your number of drops while increasing gallons delivered. Control, analyze, forecast and report on deliveries to maximize productivity. For customers with multiple locations, create as many precise delivery records as required and send billing directly to one A/R account. Manage wholesale deliveries by supply point, and turn quotes into orders and then billable transactions easily and efficiently.

## SERVICE MANAGEMENT

Focus on service profitability with a streamlined workflow that still captures all the details. For customers with multiple installations, establish a single A/R account but configure multiple service sites, each with unique history, prices, taxes and contract conditions. Schedule and dispatch calls using an intelligent datebook and a real-time dispatching board. Track and restock inventory automatically down to the van level.

## INVENTORY

Go beyond inventory tracking with warehouse distribution management capabilities that support liquid inventory, point-of-sale, transport, service parts and lubricant drumming. Plus, you can send receipt information directly to accounts payable.

## ADD ▶ More to Your E3 Energy Solution

Gather, track and intuitively manage important data analytics with advanced business intelligence.

ADD the power of ADD Energy E3 to the front seat of your delivery trucks.

Pegasus

Enhance your customer experience with a mobile wireless connection between the home office and service technicians.
