

AN EXTENSION OF YOUR RAVEN FOR INCREASED PRODUCTIVITY

ADD Systems® created the Raven Companion to enhance our complete end-to-end delivery solution Raven. The Companion on an Android phone (as a cost effective scanning device) works in concert with Raven and allows you to deliver fuel to the correct piece of equipment through asset tagging and scanning, all while wireless connected to the Raven device still in the truck. Leave Raven in the cab and just take your Companion as you fill the tank, grab a customer signature and start the ticket printing before returning to the truck. Your driver efficiency will improve exponentially and your customer will be more than pleased with the invoice accuracy. ADD Systems is the leader in providing mobile computing solutions to the petroleum and propane marketplace. Discover why.

(available separately)

CUT THE DRIVERS TIME IN HALF

How much time does your driver spend at a delivery site walking back and forth to the truck and climbing in and out of the cab? Have you ever had a driver put fuel in the wrong tank? Now you can get all that time back – no back and forth needed and customer tank accuracy assured.

DELIVER TO THE RIGHT TANK

It can be challenging to verify that you are delivering to the right tank, especially in a dark early morning or late at night. And what if there are multiple tanks on site, but only some are your customers? Accurate tank identification can be easy with the Raven Companion. It supports QR code scanning, which means you can easily label tanks one time and then simply scan each tank for verification before pumping the fuel. It's one click of a button.

CAPTURE MORE SIGNATURES

You probably capture delivery signatures on only the accounts that require them, trying to save your driver from climbing in and out of the truck. With Raven Companion the signature capture tool is with the driver at all times, so this important customer confirmation is never overlooked.

IMPROVE CASH FLOW

Get paid quickly by leaving an accurate, fully detailed, priced and taxed invoice upon delivery. Capture a signature right on the Raven Companion and start printing the invoice from a click of a button on the Companion as well. The invoice will be waiting for you and the customer in the cab.

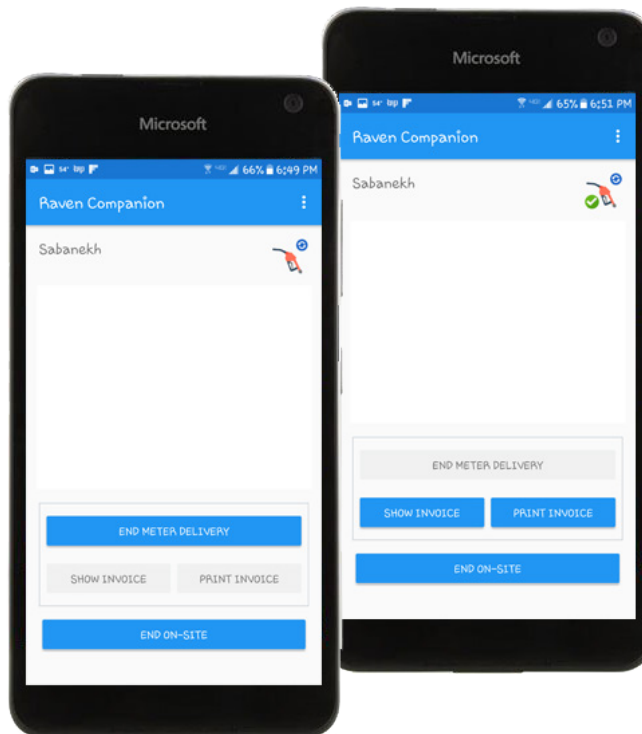

ADD Energy E3®

Seamless management of accounts receivable, credit, delivery, service, inventory and more.

Raven® Mobile

Add the power of ADD Energy E3 to the front seat of your delivery trucks and into your drivers' hands.
